FLEET TEAM DIGEST

737MAX-FTD-20-19001

Issue Title : Predictive Maintenance & Enhanced Troubleshooting (PMET) - Process & Milestones

Airplane Model	ATA	Minor Model(s)
737MAX	2000-00	-7, -8, -8200, -9
Other Model(s)	**ECCN**	
777, 787, 717, MD-11, 747, 767, 757, 737NG	9E991	

Originated Date	Last Revised Date	Created On
02/27/2019	07/07/2026	05/13/2026
Estimated Completion Date	**Next Update Date**	
12/31/2028	11/15/2026	

Revision Description

Updated status and associated tooling for all current PMET projects in the attachment.

All changes are highlighted in blue text.

Applicability

All Boeing Airplanes.

Description

Predictive Maintenance & Enhanced Troubleshooting (PMET) is a Boeing Customer Support Initiative that promotes the development and use of advanced tools and techniques which (A) help airlines troubleshoot airplane system problems and (B) perform health checks as predictive maintenance.

This initiative engages operators and several groups within Customer Support to ensure that newly identified tools and techniques are defined, validated, and released in the appropriate AMM and FIM documents.

Stakeholders include:

Airline - Request new tools and procedures to be documented, help prioritize projects, and help develop and validate these procedures

Charlie Works - A dedicated group of Boeing Field Service Reps stationed at LAX, who 1) are primarily focused on research and development of new tools and procedures, 2) help in the validation process, and 3) provide System Troubleshooting classes to airlines

Fleet Chief Office - Prioritize projects and promote the use of new tools and methods to airlines

Reliability - Prioritize projects through the analysis of delay drivers and other key indicators

EXPORT CONTROLLED -This technology or software is subject to the U.S. Export Administration Regulations (EAR), (15 C.F.R. Parts 730-774). No authorization from the U.S. Department of Commerce is required for export, re-export, in-country transfer, or access EXCEPT to country group E:1 or E:2 countries/persons per Supp.1 to Part 740 of the EAR. ECCN : 9E991

FLEET TEAM DIGEST

Chief Mechanics - Provide technical support in the development and validation of the procedures

Design Engineering - Provide technical support in the development and validation of the procedures

Service Engineering - Assist in the development and validation of the new procedures and will promote the use of the new tools and procedures via Service Requests when assisting the customer for troubleshooting and predictive maintenance.

Maintenance Engineering - Validate tooling, develop and publish new AMM and FIM procedures, including recommended maintenance schedule tasks (as required)

Background

Boeing has received feedback from several airlines on the need to have troubleshooting procedures geared towards troubleshooting intermittent/chronic faults and performing health checks.

To satisfy the need voiced by the airlines, Boeing created the Predictive Maintenance & Enhanced Troubleshooting (PMET) initiative to release new AMM and FIM procedures to help the airlines become more self-reliant.

The PMET committee is comprised of a few representatives from each of the Stakeholder groups.

This FTD will be updated periodically to communicate progress and accomplishments of PMET.

Status

The PMET committee regularly meets to discuss the new ideas submitted to GRP PMET (PMET@boeing.com), which can be sent from airlines or internal Boeing groups.

The committee prioritizes the different projects with the help of stakeholders and reliability data using the following criteria:

- Model Applicability (10%)
- System Applicability (10%)
- Ease of Implementation (30%)
- Schedule Reliability / Interruptions (20%)
- Maintenance Down Time Improvement (20%)
- Stakeholders' Decision (10%)

Once a project is selected, the team will draft, review, and validate the procedure. Once the procedure is validated, it will be published in the AMM and/or FIM for airlines to use.

Each troubleshooting procedure written will also be evaluated to determine if it will provide benefit as a health check procedure to assist in identifying degrading wiring/components.

FLEET TEAM DIGEST

Interim Action

N/A

Final Action

N/A

Milestones

Please see the attached document “PMET Project Status - May 2026" to review the status and associated tooling updates for all current PMET projects. For the completed projects, the published AMM and/or FIM references are listed.

This attachment will regularly be updated to reflect PMET's progress to airlines as well as the current backlog of projects.

See the “Applicable Models” column to review PMET projects related to the 737 fleet.

Operator Action

Boeing encourages operators to submit ideas for new troubleshooting tools and procedures that will be helpful in troubleshooting intermittent or chronic faults and that will be helpful as a health check to detect degrading wiring or components.

Operators should complete the attached form "PMET - New Procedure Request Form" and submit it via an email to PMET@boeing.com. Please reference the attached "Example of Procedure Request Form" for a completed form to serve as an example. Please note, for troubleshooting assistance or AOG requests, operators should continue submitting BCS messages. Emails to PMET are only to solicit project ideas, the implementation of which would typically entail longer lead times.
