FLEET TEAM DIGEST

737MAX-FTD-34-19003

Issue Title : 737MAX FMC Model Engine Data Base (MEDB) P/N's BCG-01T-A1/A2/A3/A4

Airplane Model	ATA	Minor Model(s)
737MAX	3460-00	-7, -8, -8200, -9, -BBJ

Other Model(s)	ECCN
	9E991

Originated Date	Last Revised Date	Created On
02/22/2019	02/22/2019	02/22/2019

Estimated Completion Date	Next Update Date

Applicability

This FTD is applicable to all 737MAX airplanes.

Description

Boeing has introduced Model Engine Data Bases (MEDBs):

P/N BCG-01T-A1, disk P/N 242A6020-1301 - original MEDB for the 737-8 airplanes

P/N BCG-01T-A2, disk P/N 242A6020-1302 – MEDB for initial 737-9 airplanes

P/N BCG-01T-A3, disk P/N 242A6020-1303 - includes performance configurations for 737-8, 737-8 BBJ and 737-9 airplane configurations

P/N BCG-01T-A4, disk P/N 242A6020-1304 - includes performance configurations for 737-7, 737-8, 737-8 BBJ and 737-9 airplane configurations

In addition to the new performance data added in these MEDBs; MEDB P/Ns BCG-01T-A2 and later update the Flight Management Computer (FMC) Cruise CG default setting for EASA/JAA rules. This change harmonizes those values with existing FAA values. The harmonized default FMC Cruise CG values are provided in the attachment to this FTD.

Background

Aerodynamic/propulsion data used by the FMC is contained in a loadable Model Engine Database (MEDB) separate from the FMC Operational Program Software (OPS). As new performance configurations are added, the MEDB is updated to include the new configurations. The specific MEDB data used by the FMC is specified by the FMC Engine/Airframe hardware program pins (reference Wire Diagram 34-61-19).

With exception of the P/N BCG-01T-A2, the 737MAX MEDBs typically include previous 737MAX configurations and they are compatible with the previous 737MAX MEDB configurations. The -A2 MEDB only includes performance data for initial 737-9 airplane deliveries and should only be installed on those 737-9 airplanes it was delivered on.

FLEET TEAM DIGEST

P/N BCG-01T-A4 MEDB is being designed for compatibility for all current production and delivered 737MAX airplanes (-7/-8/-9/-8BBJ).

When an FMC is installed on an airplane that has an MEDB installed where the Engine/Airframe program pin configuration is not available within the MEDB, the FMC will display the INVALID DATABASE message. When this message is displayed due to an incorrect MEDB, the correct MEDB must be installed before the FMC can be used.

Status

MEDB P/N BCG-01T-A3 will be incorporated into 737MAX airplane production at Airplane Line Position 7030, 7095 and on. Airplane Line Position 7030 was delivered in July 2018. Airplane Line Position 7095 was delivered in September 2018. This MEDB is compatible with FMC software, U13 and U14 (reference FTD 737MAX-FTD-34-18005).

The -A4 MEDB is presently scheduled to be installed on the initial 737-7 MAX Airplane Line Position 6744, which is scheduled to deliver in August 2019.

Interim Action

No Interim Action required.

Final Action

MEDB P/N BCG-01T-A3 will be incorporated into production 737MAX Airplane Line Position 7030 and on.

737-9 Airplanes delivered with the -A2 MEDB must use the -A2 or later MEDB.

Interchangeability between BCG-01T-A1, A2, BCG-01T-A3 is documented in the 737MAX Boeing Interchangeable Parts Drawing 242A0906 SH 2 Revision B. Interchangeability of the P/N BCG-01T-A4 MEDB will be documented in a future update to document 242A0906 prior to its initial delivery in September 2019.

Operator Action

Boeing Interchangeable Parts Drawing 242A0906 is available for Operator review regarding MEDB interchangeability.

Part Information

P/N MEDBs BCG-01T-A1, -A2, A3 or -A4 are compatible only with 737MAX airplanes and can not be installed on 737NG airplanes.
