Main Distribution Box – General Data

1. Description

The Viking Air Limited Main Distribution Box, P/N C6NF1400–1 (refer to Figure 1) forms part of the aircraft electrical power system and consists of a rectangular aluminum alloy box closed by a cover secured by quick release fasteners. Mounted within the box are sixteen relays (K1 to K11 and K14 to K18), a bank of resistors and several diodes; and when Mod 6/1605 is incorporated, another relay (K11A) is installed, making a total of seventeen relays housed in the box. Fed through J100 to J101 large gauge wires still go through original opening to appropriate relays.
